

SETN⁺ Launch Event

Founded as the national hub for the emerging Environmental and Clean Technology (ECT) sector, SETN encourages business growth through a range of R&D and technical support services.

Building on this work, **SETN⁺** aims to deliver a more co-ordinated and enhanced portfolio of services and initiatives which, in a nutshell, encourage innovation within our member companies whilst meeting the demands of external businesses with identified environmental needs.

Learn how our Business Masterminds Group, tailored to the ECT sector, will enable you to draw on expertise and shared knowledge to create real business solutions.

Hear from member companies who are already benefitting from our Evolution programme which can provide advice and support to your business at the crucial product development stage.

Discover how our partnerships with other support organisations can drive demand for the goods and services of SETN members.

And this is just the beginning. **SETN⁺** is designed to be fluid and flexible, enabling it to evolve to the needs of our members as economic and strategic pressures change.
